Office 365 Owa Search Not Working

We migrated users to O365 last week And for the most part everything is good All using E3 licenses But one users mailbox is not archiving.. I've confirmed that is OWA for the user right clicked on user name and Assigned Policy is what we configured right clicked on folders and they are set to use parent Can see the in-place archive folder but nothing is in it From Powershell Get-mailbox userf RetentionPolicy Set, ArchiveDatabase Set, ArchiveGuid set Run Start-ManagedFolderAssistant a few times From Security and Compliance Archive enabled But still nothing is moving to the archive.
